
LE IMMAGINI DI SNODGRASS & VANDEWART

D. Salmaso

CNR, Istituto di Psicologia
Viale Marx 15, 00137 Roma

Febbraio 1995

E' proibita la duplicazione di questo materiale se non espressamente autorizzato
(c) 1995.

Questo lavoro prende spunto dall'articolo originale di J.G. Snodgrass e M. Vanderwart (A Standardized Set of 260 Pictures; Norms for Name Agreement, Image Agreement, Familiarity, and Visual Complexity, J.Exp.Psychol, HLM, 1980, 6, 174-215), in cui veniva effettuato un primo tentativo veramente sistematico di creazione di una vasta banca dati di immagini visive rappresentanti item appartenenti a varie categorie.

In calce all'articolo venivano presentate le 260 figure disegnate da J.G. Snodgrass e M. Vanderwart, insieme a varie tabelle contenenti, per ciascuna figura, vari indici e le categorie in cui ogni item andava ad inserirsi. Per ciascuna delle 260 figure presentate gli autori avevano calcolato - o riportato - numerosi parametri di riferimento. Agli indici originali ne sono stati aggiunti altri. I principali di questi indici sono elencati di seguito.

COMPLESSITA'

E' il grado di complessità visiva dell'immagine raffigurata. Oggetti semplici con poche linee hanno un basso coefficiente di complessità, mentre oggetti con molte linee e molti dettagli hanno un indice elevato (range 1 a 5).

FAMILIARITA'

Indica in quale misura l'oggetto rappresentato sia familiare all'interno dell'universo quotidiano di esperienza del soggetto percepente (range 1 a 5). Figure altamente familiari hanno valori piu' elevati.

NAME AGREEMENT (H)

Una figura che ha elicitato lo stesso nome da parte di tutti i soggetti ha valore 0. Valori superiori (range 0-2.55) indicano un minor accordo sul nome della figura.

IMAGE AGREEMENT (IA)

E' una misura di quanto la figura presentata corrisponda alla relativa immagine mentale. La corrispondenza e' espressa su una scala a 5 punti dove il punteggio di 5 indica il massimo accordo.

K-F

E' l'indice di frequenza lessicale anglosassone. Non tutte le figure possiedono questo indice.

FREQUENZA LESSICALE ITALIANA (BORT.)

E' riportato l'indice di frequenza tratto da Bortolini, Tagliavini & Zampolli (1971). I valori riguardano il lessico scritto. Il valore e' quello del lemma e si riferisce all'indice totale. Non tutte le figure possiedono questo indice.

DE MAURO

Si riferisce alla frequenza lessicale del linguaggio parlato. Piu' alto il valore e piu' alta la frequenza.

RANK

Derivato dagli studi di Battig e Montague misura quanto un determinato item sia prototipico della categoria di appartenenza. Il rank varia da 1 (massima prototipicità) ad infinito.

A-A

Indica l'età in cui la parola è stata acquisita, secondo gli studi di Carroll e White. 1 rappresenta un'età di 2 anni e 9 rappresenta un'età di 13 anni o superiore.

NOME ALTERNATIVO

È indicata il nome alternativo dato alla figura in un campione italiano e la relativa frequenza. Se non ci sono nomi alternativi significa che c'è accordo pieno sul nome.

CATEGORIE

Le immagini sono state classificate nelle seguenti categorie: Article of clothing (AC, 19), Article of furniture (AF, 14), Bird (B, 8), Carpenter's tool (CT, 12), Four-footed animal (FA, 30), Fruit (F, 11), Insect (I, 8), Kitchen utensil (KU, 14), Musical instrument (MI, 9), Part of building (PB, 3), Part of the human body (HB, 13), Toy (T, 18), Type of vehicle (TV, 9), Vegetable (V, 13), Weapon (W, 6). Le immagini prive di categoria sono state classificate come NN (72).

Le informazioni sulle immagini sono state inserite in un database secondo la struttura di seguito elencata. Questo permette di recuperare il materiale secondo le esigenze della specifica ricerca.

ELABORAZIONI IMMAGINI

Ciascuna delle immagini originali e' stata importata in formato "PCX" ed elaborata in modo da renderle un po' piu' omogenee e piu' adatte alla presentazione tachistoscopica. In particolare tutte le immagini sono state contornate e inserite in uno sfondo omogeneo.
